Comparison with other CAD systems 1) Delphi vs AutoCAD The following table compares the functionality and features of AutoCAD and Delphi and highlights the key differences. Autodesk has always emphasized the fact that AutoCAD is a drafting application, and that its primary goal is not to be a programming environment. For this reason, Delphi is very similar to the old Autodesk Studio environment and lacks some of the more advanced features found in the AutoCAD product line. Delphi is a RAD environment and programming environment for MS Windows. It comes with an integrated, integrated development environment (IDE) to write applications. Delphi is similar to that of C#, C++ or Java, but with a more object-oriented syntax and focus on integration. It is designed to make programmers less dependent on a particular programming language or language framework, and is thus written in such a way that it can be used from within any type of programming language. Delphi is similar to AutoCAD and is also a CAD environment. The main difference is that it is a more RAD environment. Delphi is intended for building databases and application modules, while AutoCAD is a general-purpose CAD software package. Here are some key AutoCAD features that are not present in Delphi: - Database and Repository database - Object Browser - Annotation tools - TrackPoint for text input - Ribbon - Simulation - 3D Viewer - AutoLISP In the following table, the features of AutoCAD that are missing from Delphi are highlighted: Delphi Features AutoCAD Features Extends the typical programming languages Extends the basic Autodesk® Design Review Tools. The first is a confidentiality agreement between the Center and ENA to discuss ideas to help ENA develop customer energy management solutions, which involves Enron Net Works. The second is a memo to me from David Sorenson on ENA's internal discussions on various concepts for the new product line. The Center had done some work on the concept of building a new product line and ENA had an internal discussion on this in the past. David wanted to know if there were any issues ENA wanted to raise, so he had sent me this memo to review. The confidentiality agreement is somewhat limited in that it only covers discussions between the Center and Enron Net Works. I know that Tim DeSpain has had conversations with ENA about the new product line and there was a talk on the telephone with him and Steve Kean. At the heart of Enron Net Works' efforts are of course the people that Tim brings together from Enron Research
